

# FIELD SERVICES - Comprehensive Site Remediation

United offers comprehensive site remediation services employing both mobile treatment facilities and the support of our processing facilities throughout the northeast.

Our trained professionals evaluate a site and use our full suite of professional services to restore and rehabilitate the affected area.

When one of the nation's largest petroleum distributors needed to close a vast bunker complex, United was contacted to support the project. Decontamination of over 30 million gallons of tank capacity, and removal of over a million gallons of liquids and sludge was no problem.

Utilizing a transportation fleet of over 150 units and trained field crews, the project was brought in on budget and ahead of schedule. Whether removing a 275-gallon oil tank or cleaning out a contaminated building, United offers one of the most experienced teams in the industry. Our trained teams utilize the most advanced decontamination and cleaning techniques as well as state-of-the-art equipment to get the work completed in the most efficient manner possible.

## Our Field Services Division Includes:
