

LABORATORY ANALYTICAL SERVICES - Certified Results

Analyzing and Characterizing Hazardous and Non-hazardous Materials

Hazmat response, waste material removal and recycling often pose serious challenges. Analytical experience in these areas provides the best solution. Let United's regulatory & environmental compliance standards help all your projects. Our laboratories use EPA and ASTM analytical methodology combined with state-of-the-art technology to routinely analyze tough and troublesome samples and matrices. We consistently produce dependable, certified results identifying hazardous constituents in unknown samples aiding the generator in their waste characterization.

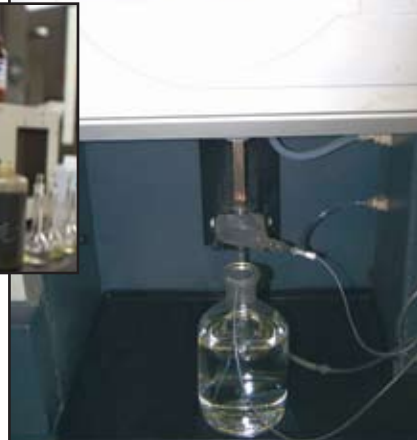

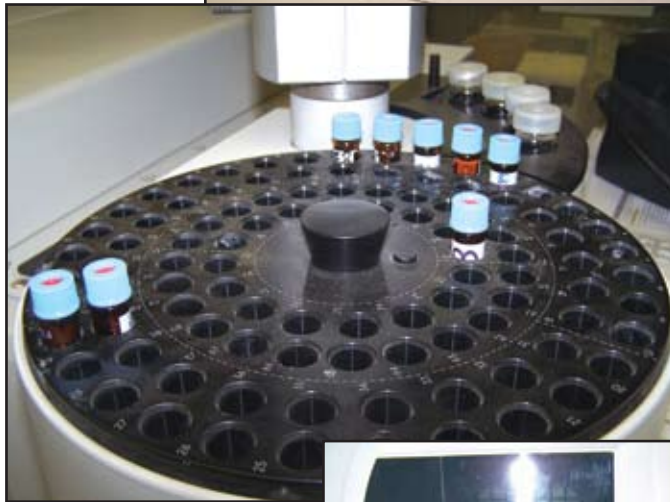

This procedure is crucial in assisting the treatment facility to determine the best methods for treatment and/or recycling. Once the waste stream is characterized, we go to work removing the materials from your premises and disposing of them safely, giving you peace of mind.

The Laboratory staff has a broad science background consisting of chemists, environmental scientists, biologists, and chemical technicians. A diverse staff equipped with state-of-the-art instrumentation provides our customers with the capability of handling the most difficult samples.
