

Solid Waste Services - Sealed Containers in Various Sizes

Convenient, Secure and Economical Roll-Off Containment

When a major Connecticut-based utility needed a large quantity of roll-off containers to securely hold contaminated soil encountered in a utility upgrade, United Industrial Services was called upon to support on-site digging operations. Since United maintains one of the largest fleets of roll-off transportation vehicles and containers, we are able to provide the versatility and security of sealed containers, vac boxes, frac tanks and dump trailers for the containment of soils, sludges and sediments.

By supplying containers specifically sized to meet the requirements of the job, United provides the most economical roll-off service with the smallest possible footprint. This affords exceptional economy, especially when compared to drums and boxes. Our fleet of roll-off trucks and trailers can provide for reliable support at a most economical cost.

Available in sizes ranging from 15 to 50 cubic yards, United's roll-off containers provide maximum on-site security and portability of both hazardous and non-hazardous solids. Generators with special size requirements should contact United regarding our custom container programs. United will design and supply custom built containers to suit long term needs.

For large volume projects, United can supply 60 to 80 cubic yard trailers in large numbers to get the job done and help reduce costly project expenses.
